

Commercial Insurance Prefill

Real-time business and property data at intake, delivered via a single API with 50+ verified attributes

Fenris Commercial Insurance Prefill delivers **50+ verified business and commercial property attributes** via a real-time API, embedded directly into quoting, routing, and underwriting workflows.

Instead of relying on manual entry, Commercial Prefill pre-populates critical fields using continuously refreshed, multi-source data tied to a validated address. The result is cleaner intake, fewer downstream issues, and decision-ready inputs from the start.

Why It Matters

Commercial Prefill returns structured business identity, firmographics, ownership signals, and property characteristics tied to a validated address.

- **Eliminate manual intake fields** that introduce errors, delays, and downstream rework.
- **Standardize submission quality** with verified business and property attributes upstream of underwriting review.
- **Enable faster, more accurate quoting** through clean, structured routing and prioritization inputs.
- **Reduce operational drag** from incomplete submissions, clarification loops.

Built for Insurance

- Sub-second API response times
- Weekly refresh across U.S. commercial addresses
- Multi-source, curated, insurance-grade data
- SOC2 compliant and production ready

Commercial Data Available
